

E-FEED+3 PM2 Series

E-FEED+3 PM2 Series powder centers are designed for applications where semi-automatic color change is needed.

They provide fast cleaning as well as effective and homogeneous powder transfer. It is used together with Electron Filter Groups as Exhaust System. Thanks to its motion activated mechanism, it provides automatic cleaning of the system by directly supplying air to the injector line. Optimal solution for productions requiring medium frequency color changes.

+ PM220-230

up to 20 injector - up to 30 injector
